

SWIMMING POOL ROOM DEHUMIDIFICATION SOLUTION

DanVex dehumidifiers supply swimming pool dehumidifiers to local authorities, hotels, leisure centres, gyms and to private individuals with dehumidification range from 2.5 to 15.5 l/hour .

The Problem... damaging humidity

Indoor swimming pool and SPA rooms are very unique in their maintenance demands. When pool water is heated to swimming temperatures, large amounts of moisture are released into the swimming pool room enclosure. This moisture is heavily laden with chlorine or bromine disinfectants. These chemicals are caustic and like acid will cause ruin to metal surfaces. They also contribute to the blistering of paint, and the rapid decay of furniture. If left uncontrolled, swimming pool room moisture will cause mold and mildew to the pool room and the rest of your house.

The Solution... DanVex swimming Pool Dehumidifiers

Dehumidification is the solution to these problems. The moisture removal is accomplished by pulling pool room air through the dehumidifying unit, taking out all of the excess water, and putting it back into your pool. Swimming pool dehumidifiers are also designed to be multifunctional systems that can also provide pool room heating and cooling.

The installation of the swimming pool dehumidifier is very easy and simple.

The variations of installation:

- ❖ wall installed
- ❖ floor installed

DanVex dehumidifiers are designed to control humidity and eliminate the damaging condensation found in your swimming pool room area. Our skilled specialists ensure that each unit is built to the highest of industry standards.
